***Abstract*—This manual provides solutions to the Assignment of Random Numbers**

1 Uniform Random Numbers

Let U be a uniform random variable between 0 and 1.

1.1 Generate 10^6 samples of U using a C program and save into a file called uni.dat .
Solution: Download the following files and execute the C program.

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q1.1.c
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/coeffs.h
```

Download the above files and execute the following commands

```
$ gcc q1.1.c −lm
$ ./a.out
```

1.2 Load the uni.dat file into python and plot the empirical CDF of U using the samples in uni.dat. The CDF is defined as

$$F_U(x) = \Pr(U \le x) \tag{1.1}$$

Solution: The following code plots Fig. 1.2

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q1.2.py
```

Download the above files and execute the following commands to produce Fig.1.2

```
$ python3 q1.2.py
```

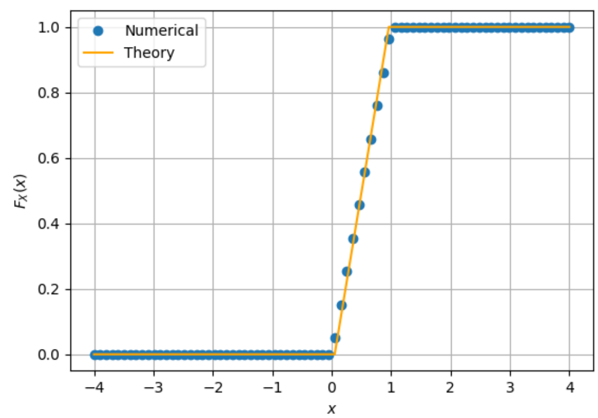

Fig. 1.2: The CDF of U

1.3 Find a theoretical expression for $F_U(x)$.
Solution: Given U is a uniform Random Variable

$$p_U(x) = 1 \text{ for} \tag{1.2}$$

$$F_U(x) = \int_{-\infty}^{\infty} p_U(x)dx \tag{1.3}$$

$$\boxed{\implies F_U(x) = \begin{cases} 0 & x \le 0 \\ x & 0 < x < 1 \\ 1 & x \ge 1 \end{cases}} \tag{1.4}$$

1.4 The mean of U is defined as

$$E[U] = \frac{1}{N}\sum_{i=1}^{N} U_i \tag{1.5}$$

and its variance as

$$\text{var}[U] = E[U - E[U]]^2 \tag{1.6}$$

Write a C program to find the mean and variance of U.
Solution: Download the following files and execute the C program.

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q1.4.c
wget https://github.com/VishalBurra27/
```

```
randomvar/blob/main/code/coeffs.h
```

Download the above files and execute the following commands

```
$ gcc q1.4.c −lm
$ ./a.out
```

1.5 Verify your result theoretically given that

$$E\left[U^k\right] = \int_{-\infty}^{\infty} x^k dF_U(x) \tag{1.7}$$

Solution:

$$\operatorname{var}[U] = E[U - E[U]]^2 \tag{1.8}$$

$$\implies \operatorname{var}[U] = E\left[U^2\right] - E[U]^2 \tag{1.9}$$

$$E[U] = \int_{-\infty}^{\infty} x dF_U(x) \tag{1.10}$$

$$E[U] = \int_{0}^{1} x \tag{1.11}$$

$$\implies \boxed{E[U] = \frac{1}{2}} \tag{1.12}$$

$$E\left[U^2\right] = \int_{-\infty}^{\infty} x^2 dF_U(x) \tag{1.13}$$

$$E\left[U^2\right] = \int_{0}^{1} x^2 dF_U(x) \tag{1.14}$$

$$\implies E\left[U^2\right] = \frac{1}{3} \tag{1.15}$$

$$\implies \boxed{\operatorname{var}[U] = \frac{1}{12} = 0.0833} \tag{1.16}$$

2 Central Limit Theorem

2.1 Generate 10^6 samples of the random variable

$$X = \sum_{i=1}^{12} U_i - 6 \tag{2.1}$$

using a C program, where $U_i, i = 1, 2, \ldots, 12$ are a set of independent uniform random variables between 0 and 1 and save in a file called gau.dat
Solution: Download the following files and execute the C program.

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q2.1.c
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/coeffs.h
```

Download the above files and execute the following commands

```
$ gcc q2.1.c −lm
$ ./a.out
```

2.2 Load gau.dat in python and plot the empirical CDF of X using the samples in gau.dat. What properties does a CDF have?
Solution: The CDF of X is plotted in Fig. 2.2 using the code below

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q2.2.py
```

Download the above files and execute the following commands to produce Fig.2.2

```
$ python3 q2.2.py
```

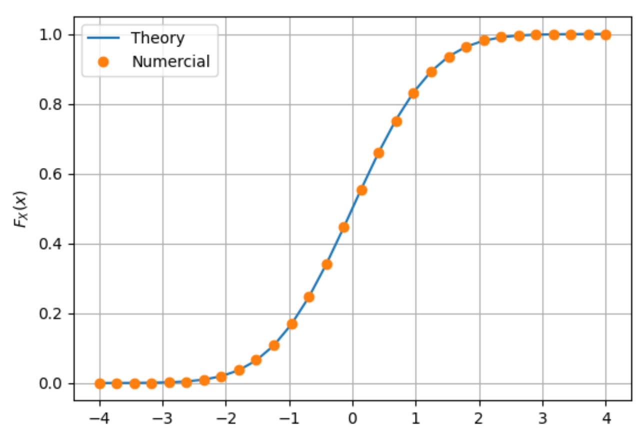

Fig. 2.2: The CDF of X

Some of the properties of CDF

a) $\lim_{x\to\infty} F_X(x) = 1$
b) $F_X(x)$ is non decreasing function.
c) Symmetric about one point.

2.3 Load gau.dat in python and plot the empirical PDF of X using the samples in gau.dat. The PDF of X is defined as

$$p_X(x) = \frac{d}{dx} F_X(x) \tag{2.2}$$

What properties does the PDF have?
Solution: The PDF of X is plotted in Fig. 2.3 using the code below

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q2.3.py
```

Download the above files and execute the following commands to produce Fig.2.3

```
$ python3 q2.3.py
```

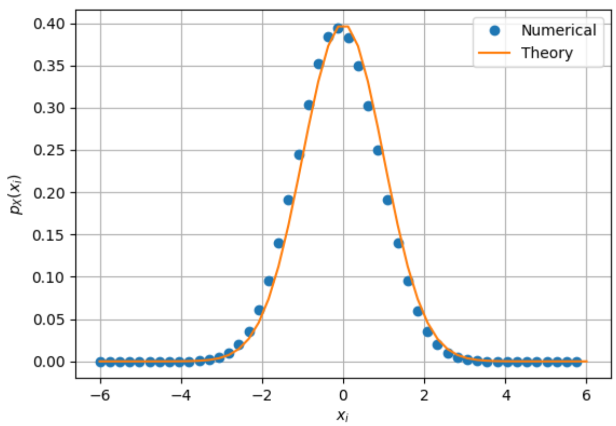

Fig. 2.3: The PDF of X

Some of the properties of the PDF:

a) Symmetric about $x = \mu$ in this case
b) Decreasing function for $x > \mu$ and increasing for $x < \mu$ and attains maximum at $x = \mu$
c) Area under the curve is unity.

2.4 Find the mean and variance of X by writing a C program.
Solution: Download the following files and execute the C program.

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q2.4.c
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/coeffs.h
```

Download the above files and execute the following commands

```
$ gcc q2.4.c −lm
$ ./a.out
```

2.5 Given that

$$p_X(x) = \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right), -\infty < x < \infty, \quad (2.3)$$

repeat the above exercise theoretically.

Solution:

1) CDF is given by

$$\int_{-\infty}^{\infty} \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right) dx \quad (2.4)$$

$$= \frac{1}{\sqrt{2\pi}} \times \sqrt{2\pi} \quad (2.5)$$

$$= 1 \quad (2.6)$$

2) Mean is given by

$$\int_{-\infty}^{\infty} x \times \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right) dx \quad (2.7)$$

$$= 0 \qquad + \quad (2.8)$$

3) Variance is given by

$$E[X] = \int_{-\infty}^{\infty} x \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right) = 0 \quad (2.9)$$

$$E\left[X^2\right] \int_{-\infty}^{\infty} x \times x \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right) dx \quad (2.10)$$

$$Var(U) = x \times \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right)\Bigg|_{-\infty}^{\infty} \quad (2.11)$$

$$+ \int_{-\infty}^{\infty} 1 \times \int \frac{x}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right) \quad (2.12)$$

$$= x \times 0 + \int_{-\infty}^{\infty} 1 \times \int \frac{x}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right) \quad (2.13)$$

$$= \int_{-\infty}^{\infty} \exp\left(-\frac{x^2}{2}\right) \quad (2.14)$$

$$Var(X) = \sqrt{2} \quad (2.15)$$

3 From Uniform to Other

3.1 Generate samples of

$$V = -2 \ln(1 - U) \quad (3.1)$$

and plot its CDF.
Solution: Download the following files and execute the C program.

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q3.1.c
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/coeffs.h
```

Download the above files and execute the following commands

```
$ gcc q3.1.c −lm
$ ./a.out
```

The CDF of V is plotted in Fig. 3.1 using the code below

```
wget https://github.com/VishalBurra27/
    randomvar/blob/main/code/q3.1.py
```

Download the above files and execute the following commands to produce Fig.3.1

```
$ python3 q3.1.py
```

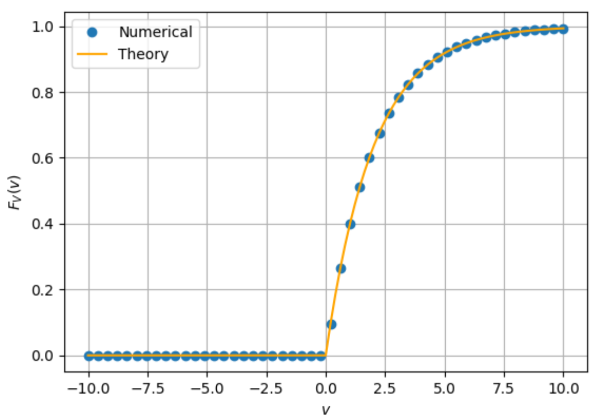

Fig. 3.1: The CDF of X

3.2 Find a theoretical expression for $F_V(x)$.
Solution: If Y = g(X), we know that $F_Y(y) = F_X(g^{-1}(y))$, here

$$V = -2\ln(1-U) \tag{3.2}$$
$$1 - U = e^{\frac{-V}{2}} \tag{3.3}$$
$$U = 1 - e^{\frac{-V}{2}} \tag{3.4}$$
$$F_V(x) = F_U(1 - e^{\frac{-x}{2}}) \tag{3.5}$$

$$\implies F_V(x) = \begin{cases} 0 & x < 0 \\ 1 - e^{\frac{-x}{2}} & x \geq 0 \end{cases} \tag{3.6}$$
